

NOV 20 2020

**BMB TECHNICAL BULLETIN
No. 2020 - 05**

**SUBJECT : GUIDELINES ON THE PROTECTION OF MARINE TURTLE
NESTING HABITATS**

Pursuant to Republic Act No. 9147 (Wildlife Resources Conservation and Protection Act of 2001) and in pursuit of the objectives of DAO 2016-12 (Adopting the Philippine Biodiversity Strategy and Action Plan), and DAO 2019-09 (Updated National List of Threatened Species), the following guidelines on the management of nesting habitats of marine turtles is hereby issued for guidance of all concern.

I. Introduction and Rationale

Five of the seven species of marine turtles of the world are found in the Philippines. These are the green turtle (*Chelonia mydas*), hawksbill turtle (*Eretmochelys imbricata*), olive ridley turtle (*Lepidochelys olivacea*), leatherback turtle (*Dermochelys coriacea*) and loggerhead turtle (*Caretta caretta*). The green turtle, hawksbill turtle, olive ridley turtle and leatherback turtle have nesting grounds throughout the country. The loggerhead turtle on the other hand feeds on the country's rich marine resources. All the five species of marine turtles are threatened with extinction.

Marine turtles are known to have nesting fidelity throughout their reproductive years. Successful reproduction is therefore dependent on the availability of suitable nesting beaches. However, nesting beaches are threatened by incessant developments and increased human activities. This may lead to physical loss of the nesting beach itself or decline in suitability due to introduction of solid waste, noise and light pollution, and other forms of disturbances. Such anthropogenic disturbances can be exacerbated by the effects of climate change such as sea level rise and storm surges leading to coastal beach erosion. Thus, active intervention to maintain the integrity of nesting beaches is crucial to arrest further decline of marine turtle nesting habitats.

II. Objectives

This Technical Bulletin intends to provide the following:

- a) Guidelines on the validation of reported nesting beaches for priority protection;
- b) Modalities in the conservation of marine turtle nesting sites in accordance with existing policies, rule and regulations; and
- c) Recommended basic activities for managed nesting sites, including pointers for managing the risks of common disturbances of marine turtle nesting beaches.

III. Identification and validation of nesting sites for priority management

1. Reported marine turtle nesting sites should be validated by the concerned DENR Field Offices through habitat survey and Key Informant interviews, using the attached Habitat Survey form “**Annex A and A.1**”. For this purpose, the initial list of marine turtle nesting sites per region is attached as “**Annex B**” for reference in the conduct of site validation, as necessary;
2. Beaches with documented nesting incidence for at least 3 successive years shall be considered for site management to maximize use of limited resources available for conservation.

IV. Management options for nesting sites

Nesting beaches are generally located within the salvage zone/easement of 20 meters (in agricultural areas) or 40 meters (in forest lands) from the highest tide mark, and those by default are within public domain as stipulated under Republic Act 9275 (Water Code of the Philippines). However, to provide on-site interventions, the following options for management can be implemented:

1. Critical Habitat Establishment

Nesting sites outside Protect Areas under the NIPAS (RA 7586) as amended by Expanded Nipas (RA 11038), may be designated by the DENR Secretary as a Critical Habitat Pursuant to the RA 9147. The Procedure in the designation of a critical habitat is provided under Department Memorandum Circular 2007-02. Critical habitats may be co-managed by the DENR and concerned local government, Peoples Organizations, Civil Society Organizations, IPs and other concerned groups. A Memorandum of Agreement (MOA) shall be executed between the DENR and partner agency/organization for the purpose. The MOA should include the institutional arrangements for managing the sites, including the creation of management council and provision or designation of staff or volunteers for on-site management.

2. Locally-Managed Marine Protected Area

Marine turtle nesting sites may be managed as part of locally-managed marine protected area in accordance with DAO 2016-26 or the Coastal Marine Ecosystems Management Program (CMEMP). Marine turtle protection activities should be included in the management plans of locally-managed marine protected areas.

3. Partnership Agreement with Private Institutions

Nesting sites, especially those fronting/adjacent to private properties, can be managed as part of business corporate social responsibility. A partnership agreement engaging the business/private entity can be established for the purpose.

The DENR may also promote the engagement of private resort owners in the management of marine turtle nesting beaches through the Adopt-A-Wildlife Species-Program in accordance with DENR Administrative Order Number 2010-16

(Establishing the “Adopt-a-Wildlife Species Program” and Providing the Guidelines Governing the Implementation thereof).

4. Nesting Sites in Protected Areas

Protection and monitoring of nesting sites within Protected Areas as described under Section IV and Section V shall be undertaken as part of the regular implementation of the Biodiversity Monitoring System (BMS). As such, the annual work plan of Protected Areas where nesting sites are located, shall include marine turtle nesting site monitoring and protection as among the work indicators.

V. Recommended activities in managed nesting habitats

A. Nest monitoring

Nesting incidence monitoring should be undertaken during the nesting season. Nesting season may vary from species to species and location. Managers should therefore be familiar with such information gathered from the nest site validation survey undertaken under Section II.2. Nesting incidence monitoring is undertaken as follows:

1. Visit areas where marine turtles are known to nest identified during Key Informant interviews. Map the nesting site using GPS to get the area (in hectares) utilized by marine turtles. This would define the nesting site;
2. Trained people or volunteers shall be assigned to regularly traverse or walk the known nesting beaches during the nesting season. As necessary, patrolling of the beach should be conducted at night and early morning;
3. Observe along the latest high tide line;
4. Record all crawls observed and indicate if the crawl is fresh or not. If possible, identify the species based on the crawl marks. Also record presence and frequency of the crawls. Fill out the nesting incidents monitoring form, “**Annex C**”;
5. If a nest is found, acquire the GPS location of the nest;
6. Observe location of nest – if nest is in a secure spot, leave it as it is;
7. However, if nest and eggs would be reached/inundated by high tide or storm surges, collect the eggs following standard protocol and transfer to a higher location. The nest should be protected by placing a plastic mesh around it, approximately 60cm in diameter and 60cm in height. Carefully dig a trench around the nest and bury about 20cm of the plastic mesh for stability. A second layer of fence may be placed 1 meter around the smaller plastic mesh. **Annex D** provides an illustration of this procedure;
8. Indigenous materials shall only be used in protecting the nest, i.e. bamboo, wood, etc. The use of any material made of metal is strongly discouraged as this may affect the development of the hatchlings in the nest;

9. The nest shall be monitored for a minimum of 45 days and a maximum of 70 days after laying. Daily monitoring of the nest should be conducted at day 30 after laying. Hatchlings would usually emerge during the cooler times of the day and not all at the same time. Hatchling emergence takes about 3 to 5 days. The nest should be monitored daily after hatchlings start to emerge;
10. The hatchlings should be released as soon as they emerge. If such is not feasible, the hatchlings should be placed in a tub with wet sand or cloth (not water!) and covered with a soft, damp cloth until the time of release. Release of the hatchlings is preferred during dusk or dawn;
11. Assisting the emergence of the hatchlings by excavation is strongly discouraged. Hatchlings in the nest vary in development and exposing them to the elements may have detrimental effects;
12. Five days after the first emergence of the hatchlings, the nest may be excavated to evaluate the contents and possibly assist trapped hatchlings;
13. Nesting incidence monitoring, including release should be properly documented in the nesting incidence monitoring form (**Annex C**) and submitted to the DENR field officer overseeing the activity or to the DENR CENRO/PENRO concerned.

VI. Managing Threats of Marine Turtle Nesting Habitats

- A. **Sound Pollution:** Noise should be reduced/minimized within nesting grounds especially during the nesting seasons. Nesting marine turtles easily get startled with noise and abandon/discontinue the nesting process on site.
- B. **Light Pollution:** Excessive artificial lights along the beach can disorient nesting marine turtles, abandon the nesting process and relocate. These can also be fatal to hatchlings as they tend to move towards the lights leading them away from the ocean.

Lights near or along nesting beach are placed low if cannot be totally turned off. Motion-activated lights and low pressure sodium vapor lights (yellow lights) are recommended to replace high-intensity lights. Light only the intended object or area and kept close to the ground, directed and shielded. Suggested installation of lights along or near the beach that are friendly to nesting marine turtles and hatchlings is illustrated in **Annex E**.

Consideration should also be given to blocking light spill from buildings near nesting beaches. This should include block-out blinds or shutters for transparent portions of a building, like glass windows and balconies, to reduce visible light transmittance values.

- C. **Marine Debris:** Logs may be washed ashore during natural calamities like typhoons and heavy rain storms which can block the path of nesting marine turtles and hatchlings. Discarded fishing nets, nylon ropes and the like, can entangle marine turtles coming up the beach to lay their eggs or returning back to the sea after nesting. Nesting beaches should be free from these debris and should regularly be removed.

VII. Supervision, Monitoring and Reporting

1. In any of the management modalities described in Section III which may be adopted for a particular managed nesting site, a MOA/Partnership Agreement shall be executed between the DENR and the partner LGU, or NGO/PO or private/business entity;
2. An annual program of activities shall be agreed upon with the partner LGU/ NGO or PO/private business that integrates the recommended management activities under Section IV and V hereof. The initial work program which shall be updated annually should form an integral part of the MOA/Partnership Agreement;
3. Support for activities under the work program of managed nesting site including monitoring shall be included in the corresponding work and financial plan and budgetary request of DENR Field Offices;
4. The DENR Field Office concerned shall undertake supervision and monitoring of site management activities at least on a quarterly basis;
5. A quarterly report on activities undertaken in the managed marine turtle nesting habitat, including accomplished standard data forms shall be submitted by DENR Field Offices to their respective Regional Office which in turn shall form part of the consolidated regional report on wildlife conservation submitted quarterly to BMB.

For guidance and compliance.

RICARDO L. CALDERON, CESO III
Assistant Secretary for Climate Change,
and Concurrent Director, BMB

BMB202002716

ANNEX A. INTERVIEW FORM

(Habitat survey, nesting/sighting verification, pressure-state-response)

1. Petsa ng Interview: _____
2. Lugar: _____
3. Tagatugon (respondent)
4. Pangalan _____ Edad _____
5. Kasarian () Lalaki () Babae Status () single () may asawa {bilang ng anak _____}
6. Angkan (pinagmulan ng lahi) _____
7. Hanap buhay _____
8. Tirahan _____
9. May sariling bangka () meron () wala () nagrerenta
10. Klase ng bangka () de-motor () de-sagwan () iba pa

11. Laki ng bangka (metro?) _____ Bilang ng taong pwedeng sumakay

12. Uri/klase ng pangingisda (fishing operation) _____
13. Oras/panahon ng pangingisda _____
14. Lugar kung saan nangingisda _____
15. Nakakita na po ba kayo ng pawikan? () oo () hindi
16. Sa buong taon, tuwing kailan kayo nakakakita ng pawikan?

Buwan (month/s of the year)	Bilang ng pawikan na nakikita	Lugar saan nakikita		Laki ng pawikan na nakikita	Ginagawa ng pawikan nung nakita	Uri ng pawikan na nakikita (species)	Iba pang komento
		Pangalan ng beach	Pangalan ng dagat				

17. Sa inyong palagay, ang dalas po ba ng mga nakikitang pawikan ay:

() dumadami () umu-unti () di nagbago

18. Sa inyong palagay, ano kaya ang dahilan nito?

19. Kapag may nakikitang pawikan, ano po ang ginagawa ninyo?

- () hinahayaan lang
() hinuhuli at ... () kinakatay () ginagawang alaga () inirereport o dinadala
sa awtoridad
() iba pa _____

20. May pagkakataon na po ba na may nahuli kayong pawikan sa inyong pangingisda?

- () meron () wala

21. Sa anong paraan ng pangingisda mas may nahuhuling pawikan?

22. Sa buong taon, tuwing kailan kayo nakakahuli ng pawikan?

23. Kapag may nahuhuling pawikan, ano ang ginagawa ditto?

24. Alam po ba ninyo na ipinagbabawal ang paghuli at pagkatay ng pawikan?

25. Anong ahensiya po ang alam ninyong nagpapatupad ng mga batas na ito?

- () DENR () Fisheries () Pulis/Militar () Mayor/LGU () iba pa

26. Napapatupad ba ang mga batas dito tungkol sa pawikan? () oo () hindi

27. May alam po ba kayo na nahuli at naparusahan dahil sa paglabag sa mga batas ukol sa pawikan?

() meron () wala

28. Ano po ang nadinig/nalaman ninyong kaparusahang ipinataw?

29. Sa inyong palagay, mahalaga ba na ipagbawal ang pagkatay/paghuli/pagbenta ng mga pawikan?

() oo () hindi

30. Bakit po kaya?

ANNEX A.1 HABITAT ASSESSMENT AND EVALUATION

1. Date of Assessment: _____
2. Location: _____
3. GPS Coordinates: _____
4. Description of Sand: black/gray white mixed others _____
 fine coarse with coral rubble mixed with soil
Other findings: _____
5. Beach Vegetation (*list species in table below*):

6. Beach Measurements:

Details	Measurement (meters)	GPS Coordinates
Beach length* (measure perpendicular length of marine turtle nest to the highest tide mark)	_____	_____
Beach width (measure parallel length of beach on two points, noting only areas as possible nesting ground)	_____	_____

* NOTE: Add more rows if more than one nest was reported along same beach

7. Nesting Abundance:
8. Marine turtle tracks seen during visit: yes no
9. Number of complete track/s (tracks coming up the beach & going down): _____
10. Number of incomplete track/s (tracks either coming up the beach only or going down only): _____
11. Marine turtle track details: Outer track width (cm): _____
Inner track width (cm): _____
12. Marine turtle nest/s seen during visit: yes no
If yes, number of active nest/s: _____ number of inactive/old nest/s: _____
13. With signs of predation: yes no
If yes, identification of possible predator: _____
14. Marine turtle hatchling tracks seen during visit: yes none
15. Marine turtle eggs seen: yes yes, but no signs of development none
16. Marine turtle egg shells seen: yes none

Other Observations during visit:

ANNEX B. REPORTED MARINE TURTLE NESTING SITES IN THE PHILIPPINES

Region 1	
	Barangay Baruyen, Bangui, Ilocos Norte
	Barangay San Lorenzo, Bangui, Ilocos Norte

ANNEX C. MARINE TURTLE NESTING INCIDENCE MONITORING FORM

Location/Site (Indicate Sitio/Purok, Barangay, Municipality, Province/City): _____

Date of Monitoring: _____

Marine turtle tracks seen: () yes () no

Number of complete track/s (Fig. 1): _____

Number of incomplete track/s (Fig. 2): _____

Marine turtle track details (Fig 3): Outer track width (cm): _____

Inner track width (cm): _____

Marine turtle nester seen: () yes () no

If yes, indicate species: _____

Nest location (GPS Coordinates): _____

Translocated: () yes () no

If yes, indicate reason for transfer: _____

Indicate new location: _____

Date of Nesting	Number of Eggs (Clutch Size)	Number of Hatchling/s Emerged	Date of Emergence	Number of Hatchlings Released	Date of Release	Remarks

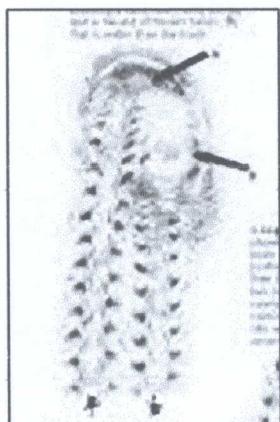

Figure 1. Complete nesting tracks

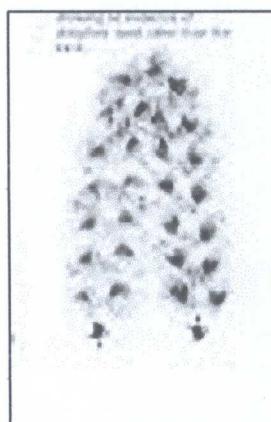

Figure 2. Non-nesting tracks

Alternating Stroke
Flipper marks alternate

Track Features

Early morning monitoring is best as tracks will deteriorate over time. The clarity of tracks can be affected by flipper damage, terrain, sand moisture, tides, wind and weather. Look for several key identifying features, along different sections of track.

The key track identification features are:

- Stroke Style
- Track Width
- Hind Flipper Marks
- Front Flipper Marks
- Plastron Drag
- Tail Drag

Loggerhead

Track Width: Less than 1 meter
Hind Flipper
Front Flipper
Plastron Drag
Tail Drag: Not present

Hawksbill

Track Width: Approx. 70-80 cm
Hind Flipper
Front Flipper
Plastron Drag
Tail Drag

Olive Ridley

Track Width: Approx. 70-80 cm
Hind Flipper
Front Flipper
Plastron Drag
Tail Drag

Green

Track Width: Approx. 94-144 cm
Hind Flipper
Front Flipper
Plastron Drag
Tail Drag

Flatback

Track Width: Approx. 90-100 cm
Hind Flipper
Front Flipper
Plastron Drag
Tail Drag

Leatherback

Track Width: Greater than 2 meters
Hind Flipper
Front Flipper
Plastron Drag: Not Visible
Tail Drag

Breast Stroke
Flipper marks side by side

Track Direction

Clues to determine track direction:
Turtles push sand backwards, the higher sand mound is at the back.
If track overlaps, the top track is the returning track.
Sand is always thrown back over the emerging track when digging.

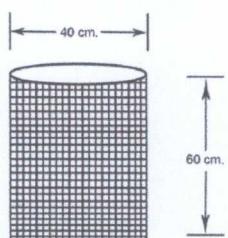

Measuring Width

Measure from outer edge of track. This may be the front or rear flipper, depending on species.

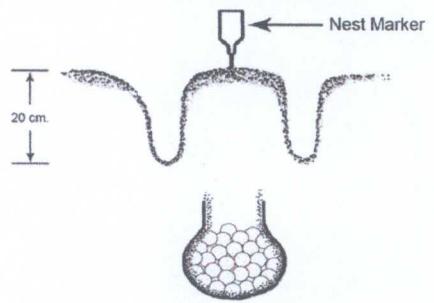

Figure 3. Nesting tracks of Different Marine Turtle Species

ANNEX D. PROTECTION OF MARINE TURTLE EGGS

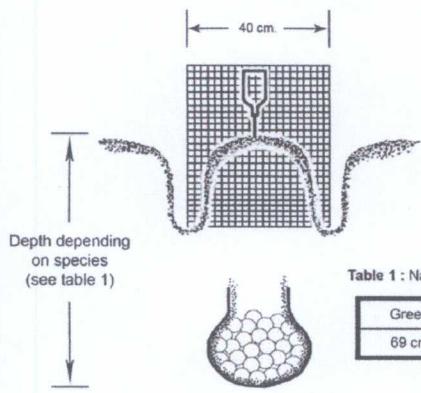

1. Dimension of wiremesh/plastic enclosure

2. Dig a trench 20 cm. deep around the nest

3. Place enclosure into the trench
Cover trench w/ sand

4. Expect hatching emergence after 45 to 70 days from laying. Monitor emergence for 3 to 5 days. Release immediately.

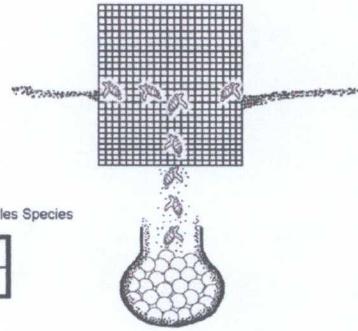

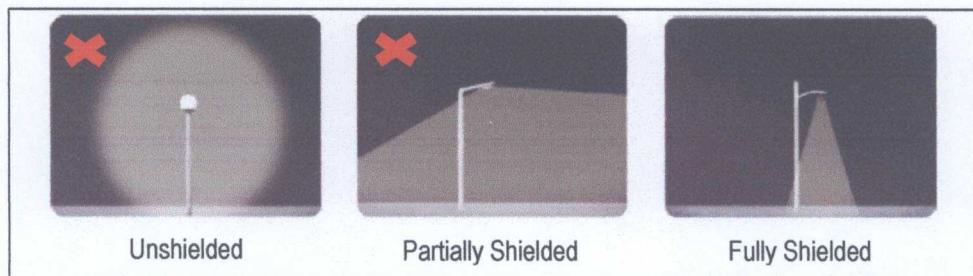

Table 1 : Natural Nest Depth of Different Sea turtles Species

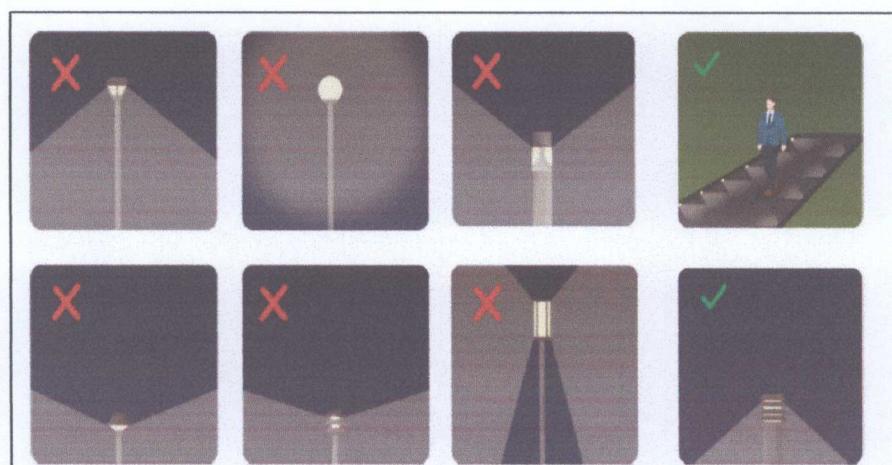

Green	Hawksbill	Olive Ridley
69 cm.	45 cm.	49 cm.

Protection of nest during incubation process

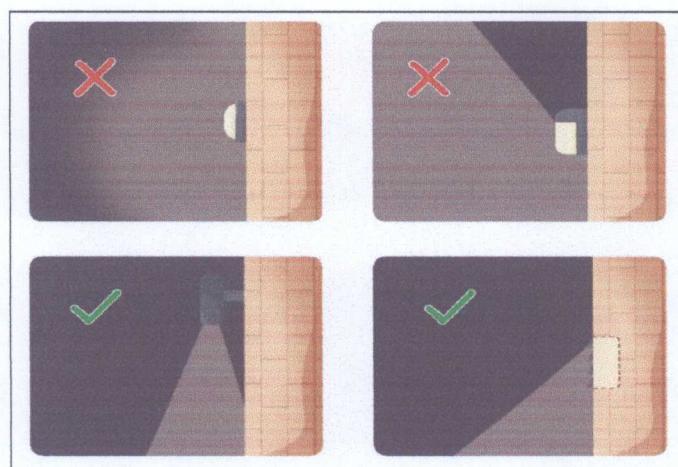

ANNEX E. RECOMMENDATIONS TO MINIMIZE EXCESSIVE ARTIFICIAL LIGHTS IN NESTING BEACHES (Source: National Light Pollution Guidelines for Wildlife, Commonwealth of Australia 2020)

Lights should be shielded to avoid lighting anything but the target area or object.
(Witherington and Martin, 2003)

Walk way lighting should be mounted as low as possible and shielded
(Witherington and Martin, 2003)

Lighting should be directed to ensure only the intended area is lit.
(Witherington and Martin, 2003).
